# What To Do If You Think You Were In Contact With A COVID-19 Case

Do NOT share anyone else's private health information (PHI).

Is it a confirmed case?

| **Yes** | **No, but testing was performed** | **No and they were NOT tested** | **Not a Direct Contact (friend of a friend)** |

Yes:

Public Health will already have been notified by the testing lab.

Public Health will notify close contacts of the case and guide next steps in coordination with SHCS

1. Follow best hygiene practices below

Test Returns Positive

No, but testing was performed:

1. People have the right to share their private health information if they wish, but no obligation. We generally recommend against disclosure to groups, as it causes anxiety and no additional measures are recommended.

2. You will not be informed of the results, however see "Yes" category.

Test Returns Negative → They will likely remain at home for 24 hours after symptoms resolve.

No and they were NOT tested / Not a Direct Contact (friend of a friend):

1. People have the right to share their private health information if they wish, but have no obligation. We generally recommend against disclosure to groups, as it causes anxiety and no additional measures are recommended.

People can still go about normal activities per local health guidelines.

2. No further action needed but see below for best hygiene practices. Remember that the flu and colds are still happening.

Hygiene Best Practices

All students and employees should:

- Monitor for symptoms and stay home if sick, handwash, and practice social distancing
- Protect vulnerable populations (send home those caring for elderly, chronically ill) or those who consider themselves in the vulnerable population
